

Good Apple School Sponsorship Form

Did You Know?

The average age kids start experimenting with...

Tobacco - a little past 12 years old

Drinking alcohol - almost 13 years old

Smoking marijuana - 14 years old

Young children are very trusting of older youth and adults. Anti-drug education beginning at an early age helps to emphasize that it's not always "OK" just because someone tells them so.

Schools are charged a nominal fee of \$150 for up to two consecutive anti-drug presentations on the same day. Please help our kids develop healthy attitudes and learn drug refusal skills
